

DESIGN & ENGINEERING

MOBILE PHONE MANUFACTURER.

The global packaging design team of one of the world's largest mobile phone manufacturers was reducing and relocating its America's Packaging Design team. They were looking to reduce infrastructure and costs, while preserving local support. Compadre quickly put in place an outsourced solution to provide capacity for packaging design, documentation, and project management for the Americas. Our customer was able to significantly reduce their fixed costs and have a solution that can ramp to meet unforecasted demand.

SCIENTIFIC INSTRUMENT MANUFACTURER.

The CEO of a Texas manufacturer of scientific instruments used by hospitals, research facilities and universities around the world sought out Compadre to take their "office supply" pack out solution to a whole new standard. Customers were questioning the quality of the expensive device in light of the "non-professional and wasteful" pack out. Compadre developed a modular system that reinforced the branding of the company, while reducing part numbers and converting to environmental friendly materials. Our customer is now able to deliver a professional package that supports the quality image of their product.
